

**Amendments to the Specification:**

Please add the following new paragraph after paragraph [0019]:

--[00019.1] Power transmission (A) also may comprise a torque limiter. Torque limiters are known in the art. In one embodiment, hub 4, damper 5, and connecting member 6 may be configured to act together to perform the function of a torque limiter. For example, it is known in the art to have damper 5 configured to disconnect from hub 4 or from connecting member 6 when the torque exceeds a predetermined level. Other methods of incorporating a torque limiter into a driving mechanism also are known in the art, and will be apparent to those of ordinary skill in the art upon a consideration of the present specification.--

**Request for Reconsideration:**

Applicant acknowledges with appreciation that the Examiner indicates that claims 2, 9, and 10 would be allowable if rewritten in independent format, including the limitations of their base claim and any intervening claims. Applicant is amending the specification to clarify that exemplary elements may correspond to a torque limiter. No new matter is added by the foregoing amendments, and these amendments are fully supported by the specification. Applicant respectfully requests that the Examiner reconsider the above-captioned application in view of the foregoing amendments and the following remarks.
